CORRIGENDUM
A GLOBAL RIESZ DECOMPOSITION THEOREM ON TREES WITHOUT POSITIVE POTENTIALS

JOEL M. COHEN, FLAVIA COLONNA, AND DAVID SINGMAN

The functions H and H_v, which first appear in [**3**, pp. 5-6], play a major role throughout this paper. One of the stated properties of H_v is that it is harmonic everywhere except at v. However, H_v fails to be harmonic at any terminal vertex. Accordingly, we assume that the tree has no terminal vertices. With this assumption, all stated properties and results of [3] are correct.

This error was first observed in connection with [1] (cf. [2]) where the functions H_v were first introduced.
